Frequently Asked Questions

Can Alvery modules be used for 5-axis machining?

Yes. PRO LINE modules are used in 5-axis machining. Use the FormVise 125 or 127W for higher cutting forces and keep a safety factor of 2 between cutting force and holding force.

Can I combine modules of different lines?

Yes, via adapters and base plates. METRO and PRO base plates use the same 50 mm grid. MICRO modules need the MICRO vise adapter (43.0120) to be used in a vise.

Are the modules suitable for welding?

No. Weld spatter damages the pin field. Alvery does not offer modules for welding applications.

Do you offer magnetic clamping?

No. Alvery modules work purely by form fit.

How long does it take to change over to a new workpiece?

Typically 10 to 60 seconds: release, reset, press in the new workpiece, lock.

Can I order modules with longer pins?

Yes, as a custom design. Delivery time by arrangement; custom designs cannot be returned.

Are CT modules radio-transparent?

The carbon pin extensions and PE foam tips have a very low attenuation coefficient. The module housing and base plates must be positioned outside the beam.

Is there a version with position monitoring?

Ask our sales team about sensor options for AUTO LINE modules.

What compressed air quality is required?

Filtered, dry compressed air at 6 bar, quality class ISO 8573-1 class 4 or better. Oiled air is not permitted.

Do you offer rental or trial modules?

Yes, a FormVise 100 Jaw Set or a FormRest XL Light Set can be borrowed for 4 weeks. The rental fee of 290 EUR is credited if you buy within 3 months.

Which software do I need?

None. All modules are mechanical or are controlled by a simple digital signal.

Where are the modules made?

All modules are manufactured and assembled in Renningen, Germany.
